Subject Index

Adaptation
  components 86
  and light history 91, 92
    functions 86
    time-course 92–4
Adenosine
  accumulating cells 298–302
  acetylcholine release 322, 323
  binding sites 307
    retinal 315–25 *see also* receptor
  biochemical characteristics 302–4
  biosynthesis and enzymes 305, 306
  colocalization 311, 312 *see also* Colocalization
  electroretinogram effects 323, 324
  ganglion cell layer 299, 300
  glycogenolysis modulation 321
  inner nuclear layer 300, 301
  inner/outer plexiform layer 302
  metabolism 295–7
    scheme 295
  neuroregulation 294–328
  neurotransmitter role 294
  outer nuclear layer 301
  purine release 308–11
    antagonist-modulated 310, 311
    light 308, 309
    neurotransmitter 309, 310
    potassium 308, 309
    tonic 309
  receptors 297, 298
  retinal blood flow 324, 325
  retinal pigment epithelium 301, 302
  transport 297
  transporter 303
  uptake 298
Adenosine deaminase, retinal 306
Adenosine-like immunoreactivity, retinal cell distribution 304, 305
Age and light history 92
Ageing
  melanosomes 133–6
  retinal pigment epithelium 125–47
  rod 76, 77
Amacrine cells 193–208
  AII and rod pathway 205, 206
    glycine 206
  agonist effects 199
  antagonist effects 199
  bipolar cells 204
  circuitry 198, 199
  directional selectivity 201, 206–8
    and GABA 207, 208
  dopaminergic 249
    rod–cone link 277
  functions 200–8
  GABA and glycine 195
  ganglion cell responses 202–5, 208
  groups and function 197, 198
  heterogeneity 194
  horizontal plane organization 196, 197
  housekeeping roles 201, 202
  information flow 200
  lesioning effects 200
  mosaic 195–8
  ON–OFF transient 198, 199
    response transience 203
  retinal growth 201
  staining 194
  surround responses 204, 205
  vertical plane organization 195, 196
Anguilla anguilla, life cycle and visual pigments 6
Animal models, retinal pigment epithelium ageing 143, 144
Anions and hypsochromal shifts 19, 24, 25
  mechanism 19
Antioxidants
  ageing retinal pigment epithelium 147
  light history 88, 89, 91
  retinal 130
Aristostomias scintillans, photophores 7
Aromatic L-amino acid decarboxylase regulation 262
Arylsulfatase B deficiency 156, 159–63
  glycosaminoglycan 164
  in vitro 169–73
    collagen metabolism 172, 173
    dermatan/chondroitin sulfate 173
    glycosaminoglycan metabolism 171, 172

lysosome appearance 171
Ascalaphus macaronius (owlfly)
chromophore 11
Autophagy 129, 131
Autoxidation, retinal pigment epithelium ageing 140, 141

Bacteriorhodopsin 42
chromophore 46
excited state 45
rhodopsin model 69
Bathorhodopsin 37, 38
absorption spectra 47
formation and decay 41
and prebathorhodopsin 44
spectral half bandwidth 47
Bathylagus spp, migration and visual pigments 6
Binding site/cavity, rhodopsin
adjustment 59
forbidden zone 63, 68, 71
definition 71
imino bond 63
models 55
molecular modeling 59–61
shape 61
simulated, testing 63, 64
stereoisomer atoms 61
Bioluminescence
A_2-A_1 pair 7, 8
opsin shift 5
photopigment 7
Bipolar cells
dopamine effects 274, 275
membrane properties 237–43
calcium current types 240–2
current–voltage relation 242
features 237
inward rectifier 238, 239
outward rectifier 240
potassium currents 237–9
response shaping 242, 243
L-type current 240–2
voltage-clamp responses 238
Birds, cone pigments 10
Bruch's membrane
ageing 126, 138, 139
Drusen 139
lipid accumulation 138, 139
structure 138

Calcium
channels in *rdgB* mutant 121
lanthanum effects 114
light-induced movement 116
mobilization in insects 117
photoreceptor synaptic transmission 225, 226
reduced in *TRP-NSS* photoreceptors 113, 114
transport, *trp* protein 116, 117
model 117
Carassius auratus (goldfish)
cone pigments 9
UV response 11
Cell culture
arylsulfatase B deficiency 169–73
differentiation 167
eyecup 166
harvest 166
lysosomal enzymes 181
regional 166, 167
retinal pigment epithelium 165, 166
collagens.167, 170
glycosaminoglycan 167, 169
hyaluronic acid 167, 169
polarization 167, 168
Cell death
retinal pigment epithelium 139, 140
types 140
Chlamydomonas sp 8
Chloride effect 14, 15, 20
iodopsin 16
occurrence 14
opsin 15
protective, heat 15, 21
NH_2OH 15, 21
Chromophore
anchored, structures 62
protein 51
retinyl, isomers 59
Colocalization of adenosine 311, 312
acetylcholine 312–14, 316
GABA 312–14
5-hydroxytryptamine 314, 317
neuropeptide Y 315
Colour vision, trichromatic 10

Computer graphics, rhodopsin binding cavity 61
Cone
conductance modulation 226
human, green and red 9, 10
membrane currents 220–5
current–voltage relationship 221, 222
depolarization-activated 223, 224
photocurrent and photovoltage 220, 221
response shaping 224, 225
voltage clamped 221
spectral classes 9
Cone pigments 8–11 *see also* individual pigments
primate 9, 10
trichromatic 10
rhodopsin identity 28
Critical fusion frequency, geckos 12

Depth
blue shifted pigments 5
and light quality 5
Dermatan sulfate
degradation enzymes 157, 158
structure 158
Detergents and binding studies 62
Diphosphoglycerate, fly photoreceptor excitation 106, 107
DNA hybridization, visual pigments 28
Dopamine
bipolar cell effects 274, 275
circadian cone contraction 265–7
pertussis toxin 267
ganglion cell input 276–8
gap junction uncoupling 268
glutamine current 268
modulation 271
horizontal cell dye coupling 269–71
melatonin interactions 268
Parkinson's disease 278, 279
photoreceptor effects 275
retinal functional roles 247–80
retinal mode of action 279
retinal pigment epithelium pigment dispersion 265, 267
retinomotor movements 264–8
rod/cone balance 275, 276
rod/cone link 277
synaptic mechanisms 268, 269
target cell effects 264–78
Dopamine release 262–4
autoreceptor control 263
chemicals affecting 263, 264
light effects 262, 263
melatonin effects 264
Dopamine synthesis 260–2, 264
control 260–2
light 260, 261
Dopaminergic cell
amacrine cells 249
identification criteria 248
interplexiform 249, 250
MPTP effect 260
retinal distribution 250
synaptic connections 251, 252
vertebrate retina 249
Drosophila mutations
rdgB 117, 118
calcium channels 121
pathophysiology 118–21
retinal degeneration 117
trp-phenotype 111, 112
calcium 113, 114
protein 116
Drusen 139
Duplicity theory 12

Electroretinography
adenosine effects 323, 324
adenosine retinal pigment epithelium receptors 325, 326
light damage 89, 90
light history effects 85, 86
Epiretinal membranes, fibroblast growth factor 362

Fibroblast growth factor
actions 338
affinity cross-linking 355
biological activity 337, 338
characteristics 340
dystrophic RCS rats 350, 351
microscopy 352
epiretinal membranes 362
extraction 338–40

family homology 335
ganglion cells 347, 348
gene 336
genome organization 336
glial cells 348
GTP effects 356
immunological detection 342–4
in situ hybridization 341, 342
light-induced movements 351, 353
molecular biology 334–7
Müller glial cells 347
neovascularization 361
opsin levels 350
opsin photoreceptors 351, 353
photoreceptor metabolism 351–7
PR nuclei 357
purification 339
phosphorylated 354, 355
receptors in development 343–7
retinal 338–43
retinal capillary endothelium 360, 361
retinal cell biology 338
retinal cell survival 366, 367
retinal degeneration 362–4
retinal differentiation 365, 366
retinal function 366
retinal glial cells 357
retinal pathology 361–4, 367
retinal photoreceptors 348
retinal pigmented epithelium 359, 360
retinal regeneration 367
rod outer segment 340–2
bound 353
release 353–6
Filter, oil droplet 10
Fish
blue shift 6
cone composition and age 11
depth and opsin shift 5
light absorption 6
retinal dopamine 272–4
visual pigments 4
difference spectra 6
Fly photopigment, spectral characteristics 101
Fly photoreceptors, inositol lipid pathway 100–21
Fovea, fish 12
Free radical damage 141
Ganglion cell, rod–cone input and dopamine 276–8
Ganglion cell responses
amacrine cells 202–5
trigger features 205
generation 202
transience 203
Gekko gekko (Tokay gecko)
dark exchange 22
iodopsin similarity 23
microphotometry of cells 18
oil droplets 13, 15
521-opsin 13
opsin stereospecificity 13, 19
pigment 521, 13, 14
chloride effect 14, 20
dark exchange 22
iodopsin similarity 23
pH effect 22, 23, 27
thermal effect 14, 20
rhodopsin-like properties 13
visual pigment 13, 18
borohydride sensitivity 15, 20
visual cells 13, 15–17
outer segment 13, 18
pattern 16
Geckos
critical fusion frequency 12
visual pigments 12
microspectrometry 13
outer segment bleach 13, 14
Tokay 13
Gene
NORPA 109, 110
TRP 111–14
lanthanum 114
product 114
Gene transfer, retroviral 182, 183
construction 185
correction 185–7
promoters 186, 187
uses 188
β-Glucuronidase deficiency 162–5
activity 181
experimental correction 185, 186
retinal pigment epithelium disease 180, 181
vector construction 183–5
vector treatment *in vitro* 182–5

Glycosaminoglycans
degradative pathways 157, 165
defective 177–9
differential 173–9
retinal pigment epithelium 155
Glycogenolysis, adenosine modulation 321
G-protein
excitation role 101
inhibition 102, 104
phospholipase C activity 108, 109
analog effects 107, 108
photoaffinity labelling 103
quantification 103
GTP analogs 102, 104

Halobacterium halobium 14
Halorhodopsin 14, 15
Heparan sulfate
degradation enzymes 157, 158
structure 158
Heparin binding growth factors 334
Horizontal cells
axon terminals 233
centre-surround organization 204
cone-communication 271, 272
dopamine action in teleosts 272–4
dye coupling and dopamine 269–71
glutamate sensitive channels 271
membrane currents 226–36
anomalous rectifier 228, 229
4-AP-sensitive 231
bistable state 236
calcium, types 231–3
electrical coupling 233, 234
gap junctions 233, 234
in vitro 235
inward currents 229, 230
potassium 227–31
sodium 227
stable 235
voltage clamp 229
voltage-current 228–30, 235, 236
response properties 234–6
synapses 226
Hydroxylamine sensitivity 25
Hypsochromic anion effect 16–19
anions causing 19, 24
p-mercuriphenyl sulfuric acid 19, 26
and chloride 19, 26
and nitrate 19, 26
nitrate 17, 22
521-pigment 16
-SH effect 19, 25
Hypsorhodopsin 39
chromophore model 40
detection 42, 43
formation and decay 41
spectrum 40

L-Iduronidase deficiency 162–5
dermatan sulfate 179
glycosaminoglycans 164
degradation 177, 178
in vitro 178
heparan sulfate 179
photoreceptors 165
Inositol lipid cascade 100–11
GTP S binding 102, 103
information flow 109
light-activated G-protein 101–4
Lucilia NSS mutant 112, 113
NORPA gene 110, 111
prolonged depolarizing afterpotential 101, 102
scheme 116
Inositol triphosphate
excitation and adaptation messenger 104–11
fly photoreceptor excitation 105–8
G-protein analogs 107, 108
Limulus depolarization 104
phospholipase C activation 105
Iodopsin
chloride effect 16
gecko pigment 23
ion effect 8
microspectrophotometry 9
properties 8
Ionic channels 215, 216
types 216

Kyle–Doolittle hydropathy analysis 66

Lamprey retina 11, 24, 25
photoreceptor classes 25

visual pigment 25
Lanthanum
calcium levels 114
fly receptor potentials 114, 115
mutation mimickry 114–6
Laser photolysis
femtosecond 45, 46
picosecond 36, 42
Light damage 80–91
factors controlling 89–91
light history 81, 82
lipid peroxidation 83
retinal photomicrographs 89, 90
rhodopsin-mediated 82, 83
rod outer segment morphology 84
theories 82, 83
testing 83–9
Light history
adaptation 91, 92
retinal microscopy 94
time course 92–4
adaptive ability 82
electroretinogram 85
lipid metabolism 95
mid-life changes 91
phospholipid synthesis 95, 96
phospholipid turnover 95
rat retina 75–97

Synaptic transmission, calcium and photoreceptor 225, 226

Transforming growth factor β 351
Transmutation hypothesis 12, 23
and geckos 24
Trichromacy, cones 9
Tyrosine hydroxylase
factors affecting 261, 262
light effects 260, 261

Ultraviolet light 10
color 10
Ultraviolet vision 10, 11
features 10

Visual pigments
phylogeny 25–7
transmuted 11–25
Visual purple (Sehpurpur) 2
Vitamin E and light history 88, 89
Voltage clamp 217

Watasenia scintillans, photopigments and migration 7
